SOFTWARE ENGINEERING MAJOR

PROFESSIONAL SUMMARY

Software Engineering undergraduate with strong interest in Machine Learning, Artificial Intelligence, and Intelligent Systems Development. Experienced in building practical software and IoT solutions including machine learning models, database-driven applications, and embedded systems. Skilled in developing scalable systems and applying technology to solve real-world problems. Currently seeking an internship opportunity to gain industry experience and contribute to innovative technology projects.

TECHNICAL SKILLS

• Programming Languages

Python, Java, C++, SQL, JavaScript

• Machine Learning

Scikit-learn, Model Training & Evaluation, Feature Engineering, Data Preprocessing, Regression Models (Linear, Random Forest, SVR, KNN, Lasso), Model Serialization (Pickle)

• AI & Automation

n8n Workflow Automation, API Integration, Webhooks, AI-powered Process Automation

• Networking

TCP/IP, IP Addressing, Subnetting, Routing & Switching, Cisco Packet Tracer

• Tools & Technologies

MySQL, XAMPP, Apache Derby, Arduino, ESP8266 (NodeMCU), Git, NetBeans, NetLogo

LEADERSHIP & ACTIVITIES

• Google Developer Student Clubs (GDSC)

– Member

• UNESCO Youth Club – Member

• World Literacy Foundation – Volunteer

• TEDx – Participant & Contributor

• Mountain Top University – Campus Tour Guide

EDUCATION

Expected Graduation: 2027

Mountain Top University, Nigeria

B.Sc. Software Engineering

Relevant Focus Areas:

- Machine Learning
- Artificial Intelligence
- Software Development
- Networking & Systems Design

PROJECTS

Tech Stack:

Python, Scikit-learn

Uber Fare Price Prediction – Machine Learning Project

- Processed and cleaned a ride dataset for machine learning modeling.
- Engineered time-based and contextual features to improve prediction accuracy.
- Trained and evaluated multiple regression models using MSE, MAE, and R^2 metrics.
- Applied feature scaling and prepared the trained model for deployment using serialization.

Tech Stack:

ESP8266 (NodeMCU), RC522 RFID, MySQL, XAMPP

RFID/NFC IoT Attendance & Access System

- Designed and built an IoT-based attendance and access control system.
- Integrated RFID hardware with a backend database for real-time attendance logging.
- Developed the architecture connecting embedded hardware with a database system.
- Documented system setup and hardware integration process.

Tech Stack:

Embedded Systems, Sensors

Autonomous Obstacle Avoidance Robot

- Developed an autonomous robot capable of detecting and avoiding obstacles.
- Implemented sensor-based navigation logic for real-time movement decisions.
- Added IR remote override functionality for manual control.

Tech Stack:

n8n, APIs, Webhooks

AI Workflow Automation System

- Designed automated workflows integrating AI services and APIs.
- Implemented webhook-triggered automation pipelines.
- Built automation solutions to optimize repetitive digital processes.
